Tyrant CNC Extended Magazine Release for the SIG SAUER P365 For firearms enthusiasts and SIG SAUER P365 operators alike, there's nothing more critical than the intricacy of the product's design and its efficiency in function. Tyrant CNC has been at the forefront of combining both these elements seamlessly. Introducing the Tyrant CNC Extended Magazine Release for the SIG SAUER P365—a product that emerges as the nexus of engineering brilliance and practical excellence. **Material & Manufacturing:** At its core, every product's efficacy begins with its foundational material. The Extended Magazine Release is no different. Crafted via Metal Injection Molding (MIM), this piece is made out of 17-4 stainless steel. The MIM process ensures that every piece produced is not only of high precision but also boasts a uniform, consistent quality. The 17-4 stainless steel, known for its strength and corrosion resistance, enhances the longevity and reliability of the magazine release, ensuring it can withstand the rigors of regular use. **Finishing & Aesthetic:** Beyond functionality, there's an undeniable importance of aesthetics in firearm components. Tyrant CNC has ensured that the Extended Magazine Release is as visually appealing as it is functionally effective. Post manufacturing, the product undergoes a bead-blasting process which gives it a smooth, matte finish. This is further elevated with a PVD (Physical Vapor Deposition) coating available in two iconic shades: stealthy black or luxurious gold. This not only augments the visual appeal but also adds an additional layer of protection against wear and tear. **Design Features:** The SIG SAUER P365 Extended Magazine Release isn't just about looking good—it's about performing better. The product boasts deep grooves, meticulously designed to provide an enhanced grip in all conditions. Whether you're under duress in tactical scenarios or simply at the range on a wet day, these grooves ensure that your finger finds its place with confidence. While some may worry about such grooves being too harsh, the design strikes a balance. It's tactile without being aggressive, ensuring that every interaction feels just right. Furthermore, the extended and raised surface of the magazine release is a game-changer. It accelerates the magazine release process, making it quicker and reducing the effort required. Yet, in its engineering wisdom, Tyrant CNC has ensured that this extension doesn't interfere with IWB (Inside the Waistband) holsters, an attribute that many concealed carriers will deeply appreciate. **Form & Function:** In the world of firearms, there's often a tug of war between form and function. With the P365 extended Magazine Catch, you don't have to choose. It's the perfect compromise, ensuring that while the SIG 365 mag catch looks good, it doesn't compromise on its core function. It epitomizes the synergy of aesthetics and operational excellence. **Conclusion:** The Extended Mag Catch Assembly for the SIG P365 is more than just a product. It's an emblem of Tyrant CNC's commitment to excellence, pushing the boundaries of what's possible in terms of design and functionality. If you own a SIG SAUER P365, this extended magazine release isn't just an upgrade—it's a necessity. **Fitment Notes** Sig Sauer P365 P365 X P365 XL P365 MACRO ALL P365 SPECTRE SERIES Fits on California compliant versions **Component:** Extended Magazine Release
